

# AEM Hydro Cluster

## The large, fully assembled plug-and-play core system for your individual H2 application

The integration of the **latest technical developments** for the **storage of renewable energies** and their **use in downstream applications** is one of the most important topics for the future in shaping a sustainable, climate-neutral future. The universal talent **hydrogen is one of the key elements.**

Get excited about a fully assembled, ready to run and packaged electrolyser system in a 20' container.

Up to twelve 19" Racks can be integrated, and every Rack contains up to 5 electrolysers and one dryer. The necessary demineralized water ( $R < 20 \mu S$ ) is supplied to the system via the central water supply.

Hydrogen production is up to 72kg/24h, or 36Nm<sup>3</sup>/h, with a purity of ~99.9%.  
By installing appropriate dryers, the purity can even be increased to 99.999%.

Please feel free to **make an appointment** with us because we are sure to have the **right solution for you and your application.**
